

Russian cursive — X x

familylore.ai/script/russian-cursive/letters/ha

x X

Watch for

The glyph will not decide it: kha is the same shape as Latin X in uppercase and lowercase, in roman and in italic, and in Russian cursive the lowercase is sometimes written identical to a block lowercase Latin x. Go by the word it sits in and by the language of the document rather than by the letter itself; in Russian the shape carries the fricative /x/, the sound of the hard ch in loch.
